

General

1. What is the difference between **Where Used** and **Where Referenced**?
2. What is Teamcenter preference?
3. How the difference between site level and User level preference?
4. How to create site-level preference?
5. How to create User-level preference?
6. How to create a custom **XML Rendering Stylesheet**.
7. How to register a custom Stylesheet?
8. How to create a group-based Stylesheet?
9. What is the difference between revision and version?
10. What is a sequence in the context of Item Revision?
11. What happens when you checked-out an object?
12. Can we modify the released object?
13. How to know if the object is in the workflow process?
14. How to change object ownership?
15. How to enable or disable visibility of related objects of Item Revision?
16. Which preference to use to control the visibility of the Teamcenter Module?
17. How to assign projects to an object?
18. What is the difference between Privileged and Non-Privileged users?
19. What is the use of the **Authorization** module?
20. What is the use of the **Command Suppression** module?

Structure Manager

1. What is a **Variant Condition**?
2. How to create variant conditions?
3. What is the **Revision Rule**?
4. How to create revision rules?
5. What is the default revision rule of Teamcenter?

6. How to set the default revision rule?
7. How to compare two BOM?
8. What is an alternate?
9. What is a substitute?
10. What is the importance of **Find No.** in Structure Manager?
11. What is **Occurrence**?
12. What is **Revision Effectivity**?
13. What is **Date Effectivity**?
14. What is **Occurrence Effectivity**?
15. How to create a **Precise Assembly**?
16. What is the difference between E-BOM and M-BOM?
17. What is View Type in structure manager?
18. How to create **M-BOM** from **E-BOM**?
19. How to display item revision properties as BOMLine properties?
20. How to export BOM structure into an excel file?
21. How to create BOM structure into Teamcenter using Excel?

Access Manager

1. What is ACL?
2. What is Rule Tree in Access manager?
3. How rule is applied on the Teamcenter Objects?
4. How to create a custom ACL?
5. What is the difference between **rule-based protection** and **object-based protection**?
6. What is named ACL?

Query Builder

1. How to create a custom query using query builder?
2. How to export query from Query Builder?
3. How to import query using Query Builder?
4. What is the Search Type while creating a query?
5. What is User Entry L10N Key?

6. How to create a query to search Item Revision based on the attribute value available on the Revision master form?
7. What is the importance of Referenced By while creating a query?
8. What is the difference between Local query and Keyword Search Query?
9. How to set a default value to query attribute?
10. How to add frequently used queries to Saved Searches?

Report Builder And PLM XML Import Export

1. What is Transfer mode?
2. What is Property Set?
3. What is a Closure Rule?
4. What is a filter rule?
5. How to define closure rule and property set to get workflow task attributes?
6. How to create a custom report using query builder?
7. What is the difference between **PLM XML** and **TCXML**?
8. What is the Process and Traverse action type while creating the closure rule?
9. What is the difference between attribute and property?
10. How to define which properties to be exported while generating PLM XML?

Multi-site Environment

1. What is **Publish** and **Unpublish** of an object in the multisite environment?
2. How to configure a multisite environment?
3. How to publish an object?
4. How to unpublish an object?
5. Can we delete a replica object alone?
6. Can we delete a master object without deleting a replica?
7. How to know if an object is a master object or a replica?
8. What is **ODS**?

9. What is **IDS**M?

10. How to configure ODS and IDS

M on the multisite environment?
