

## UNIX Exercise

- ❖ Verify that you are in your home directory.
- ❖ Make the directory dir using the following command: mkdir
- ❖ List the files in the current directory to verify that the directory has been created correctly.
- ❖ Change directories to another dir.
- ❖ Verify that you have succeeded in moving to another directory.
- ❖ Using the vi editor, create the file testfile and put your name and address in it. Save the changes and exit the editor.
- ❖ Verify that the file testfile exists.
- ❖ List the contents of the file testfile to the screen.
- ❖ Make a copy of the file testfile under the name secondfile.
- ❖ Verify that the files testfile and secondfile both exist.
- ❖ List the contents of both testfile and second file to the monitor screen.
- ❖ Delete the file testfile.
- ❖ Verify that testfile has been deleted.
- ❖ Clear the window.
- ❖ Use the "bang" command to re-run the command that verified that testfile has been deleted.
- ❖ Rename second file to the file.
- ❖ Issue the command to find out how large the file is. How big is it?
- ❖ Copy the file to your home directory.
- ❖ Remove the file from the current directory.
- ❖ Verify that the file has been removed.
- ❖ Copy the file from your home directory to the current directory.
- ❖ Verify that the file has been copied from your home directory to the current directory.
- ❖ Change directories to your home directory.
- ❖ Verify that you are in your home directory.
- ❖ Verify that a copy of the file is in your home directory.
- ❖ Remove the file from your home directory.
- ❖ Remove the file from the directory a dir.
- ❖ Remove the directory dir from your home directory with the following command.
  - ❖ rmdir, rm -rf <dirname>
- ❖ Verify that the file and dir are gone from your home directory.
